LS30 AA OVERVIEW

Profiles:

Profiles are manufactured from 6063-T5 extruded aluminum with a wall thickness of up to 1/8'' allowing for oversized panels. The door systems are available with either powder coat, Kynar or anodized finishes in virtually any color the customer chooses.

Tracking:

There are five types of tracks available to accommodate any flooring conditions, allowing for an almost seamless look with only 3/16″ protrusion above the finished floor. All weight is carried on the bottom track, the top track serves as a guide.

Configurations:

These systems can accommodate up to 5 panel per unit.

Hardware:

The wheel carriages are comprised of stainless steel wheels and have a corrosion resistant treatment applied for high performance in coastal regions. Each wheel carriage can support up to 550 lbs . The operating mechanism includes a multi-point lock with a flush handle. The entire door system has specially designed EPDM gaskets to create a totally closed, weather tight system.

Weight:

Each panel weighs approximately 7 to 8 lbs per sq ft depending on overall panel size and glass configuration.
